

the difference is { everything }

The new range of Alternative Additives is added to our product portfolio

Filtrona Filter Products is pleased to introduce the new range of Alternative Additives. These materials are the result of extensive research and development work carried out by our Filtrona Technology Centre. The Alternative Additives range will bring even more added value to our ranges of special filters.

We are continually investigating ways to improve the materials we use to produce our filters and the Alternative Additives range will continue to grow as these new and exciting materials become available for commercial production. If you would like to keep up-to-date with these new materials, please subscribe to our e-newsletter (<http://www.filtronafilters.com/enewsletter.aspx>).

Furthermore, our knowledge and innovation of many different types of materials mean that we can work closely with you to develop bespoke additives. The choice available in the Alternative Additives range represents only a small proportion of the materials being researched and developed by the Filtrona Technology Centre. We recommend that you discuss any possible ideas about new materials with us (To contact us: <http://www.filtronafilters.com/contact.aspx>).

Add value to your brand with a Filtrona special filter, and even more value with an Alternative Additive.
